Co-published by the Institute for Parks, People, and Biodiversity, University of California, Berkeley and the George Wright Society.

Parks Stewardship Forum explores innovative thinking and offers enduring perspectives on critical issues of place-based heritage management and stewardship. Interdisciplinary in nature, the journal gathers insights from all fields related to parks, protected/conserved areas, cultural sites, and other place-based forms of conservation. The scope of the journal is international. It is dedicated to the legacy of George Meléndez Wright, a graduate of UC Berkeley and pioneer in conservation of national parks.

Parks Stewardship Forum is published through eScholarship, an open-access publishing platform subsidized by the University of California and managed by the California Digital Library. Open-access publishing serves the missions of the Institute for Parks, People, and Biodiversity and the George Wright Society to share, freely and broadly, research and knowledge produced by and for those who manage parks, protected/conserved areas, and cultural sites throughout the world.

Parks Stewardship Forum is distributed under a Creative Commons Attribution-NonCommercial 4.0 International License (CC BY-NC 4.0) that allows others to copy, distribute, translate, adapt, and build upon original submissions to Parks Stewardship Forum, as long as they provide appropriate credit to the author(s) and do not use the submission for commercial purposes. Anyone who uses or redistributes the submission under this license must indicate any changes that were made, must link to the license, and cannot imply that the author endorses them or their use. More information about this license is available at https://creativecommons.org/licenses/by-nc/4.0/.

Some photos published in Parks Stewardship Forum are covered by other Creative Commons licenses, which can be found here. From time to time Parks Stewardship Forum also reprints, with permission, previously published material. Such material is subject to its original copyright, as indicated.

Parks Stewardship Forum is published at https://escholarship.org/uc/psf.
A version designed for online reading is also available at https://parks.berkeley.edu/psf.

PSF is designed by Laurie Frasier • lauriefrasier.com

On the cover of this issue
The precipitous rock spires of Meteora World Heritage Site in Greece have a complex geological history. Over the centuries a number of Eastern Orthodox monasteries were built atop them, and today’s World Heritage Site recognizes this cultural history as part of the overall geoheritage. | STATHIS FLOROS
CONTRIBUTING TO PARKS STEWARDSHIP FORUM

We welcome proposals for papers in PSF’s two main departments: “New Perspectives,” for non-peer-reviewed articles that will be evaluated solely by the journal’s editors; and “Advances in Research and Management,” for articles that will undergo formal peer review. We also invite proposals for “The Photographer’s Frame,” our regular feature in which contributors tell a compelling conservation story in photographs.

More information and manuscript submission guidelines may be found at:

The George Wright Society advances the scientific and cultural resource values of parks, protected and conserved areas, cultural sites, and other forms of place-based conservation. The Society promotes research and resource stewardship across disciplines; brings practitioners together to share their expertise; provides avenues of communication among scholars, researchers, educators, practitioners, and the public; and supports informed conservation decisions and management actions that embrace these values. By uniting people from many different backgrounds around a common passion for protecting Earth’s natural and cultural heritage, we create the collaboration needed to meet today’s greatest conservation challenges.

The UC Berkeley Institute for Parks, People, and Biodiversity aims to bring an interdisciplinary approach to the research, management, and protection of our national, state and local parks and public lands. Recognizing that parks and public lands play an increasingly important role in climate adaptation, public health, education, jobs, and environmental justice, the Institute will serve as convener, research coordinator, and bridge between field managers and the academic community.

The Institute is devoted to the investigation, dissemination, and application of science to the critical issues facing national, state, and local parks, and equivalent protected areas. The Institute fosters cross-disciplinary research, applied science, policy, and field management, and also strives to help prepare the next generation of conservation leaders in academia and in the field.
